

“SAP Business One has become the central point of truth in our business. We make very few decisions without the data that comes out of SAP Business One.”

Jared Buissinne, IS Officer, Jachris Hose and Couplings (Pty) Ltd

SAP BUSINESS ONE PROVIDES SEAMLESS CONTROL AND CONNECTIVITY

The largest supplier of specialised hose and couplings in Africa, Jachris, turned to G3G to help implement SAP Business One when they reached a dead-end with their previous system. With more streamlined inventory management and better decision making, Jachris has started to expand into other territories.

OBJECTIVES

- Jachris previously used a traditional paper system that did not contribute to management decision making, thus their goals could not be achieved.
- There was no stock control, which made short-term and long-term planning difficult.
- The entire accounting process was being done manually, which was time consuming and tiresome.
- A new strong and reliable business management system was needed.

WHY SAP AND G3G

- SAP Business One offered the best solution to Jachris' problems.
- G3G offered invaluable support and could build custom modules to meet specific needs, with the BOM Builder Solution.

BENEFITS

- Since implementation, Jachris now has full control of all data, so decisions can be made in real time.
- Stock levels can be planned seamlessly before rolling out new sites and expanding product lines.
- Data is easily accessed, and effectively used to accelerate innovation and growth.
- Real-time reports highlight current sale figures, making budgeting and forecasting easier.
- Inventory management is more streamlined and business processes are more efficient.
- Control over the production environment has been enhanced.
